Hello!

I'm Abhijith.

Before design, I studied Electrical and Electronics Engineering, then completed an M.Tech in Robotics and Automation at the College of Engineering Trivandrum. For my master's thesis, I built an autonomous landmine detector using Raspberry Pi, Arduino, ROS and lidar.

Robotics taught me to think in systems: how the parts connect, where things break, and what happens next. I now bring that way of thinking to information architecture, interaction design and interface details.

EXPERIENCE

Freelance UI/UX designer

Remote · Aug 2025 – Jul 2026

UI/UX design intern

Zoople Technologies · Mar – Jun 2026

EDUCATION

M.Tech · Robotics and Automation

B.Tech · Electrical and Electronics Engineering

UX/UI Design certification · Intellipaat

PRODUCT DESIGN · MOBILE APP

RepUp

Less friction. More momentum.

INDEPENDENT APP CONCEPT

ROLE

End-to-end UI/UX

TIMEFRAME

3 weeks · 2026

PLATFORM

iOS & Android

Clarity is part of the workout.

Beginners felt overwhelmed by choices and unclear guidance. More experienced users wanted meaningful progress data without being treated like beginners. Both needed a clearer route from opening the app to getting started.

Project research: Google Forms survey (127 respondents) and eight interviews of 20–30 minutes. These are research findings, not measured product outcomes.

127

survey respondents

72%

struggle with consistency

84%

want a simpler experience

68%

want visual progress

“Too many features crammed into one screen. I just want to start my workout without digging through menus and settings.”

Map the loop before the screens.

01 Listen & define

A survey, eight interviews and a review of Nike Training Club, Peloton and MyFitnessPal surfaced two needs: guidance for beginners and useful data for experienced users.

02 Map the daily loop

I organized the experience into six sections and three core journeys: onboarding, the daily workout loop, and upgrading to Pro.

03 Build & refine

Low-fidelity wireframes established hierarchy before the high-fidelity system. Peer and target-user feedback informed layout and interaction refinements.

SIX SECTIONS / THREE CORE JOURNEYS

A shorter path to action.

01

Put the next workout first

Today's workout has its own start action on Home. The design target was a route of three taps or fewer, responding to the 55% who asked for quick-start workouts.

02

Make progress a reason to return

The weekly chart appears on Home, while Insights and Progress reveal longer-term trends. This responds to the 68% who asked for visual tracking.

03

Ask only what shapes the plan

Weight, height and fitness level form a short onboarding sequence. The goal was a fast, relevant start; the under-one-minute target still needs timed validation.

One visual system. A daily rhythm.

WHAT I'D DO NEXT

Design the active workout timer, completion flow and recovery states. Then test the time to start a workout and whether AI coaching adds enough value to earn its place.

POPPINS / ICONIFY / 4 PX SPACING SCALE

WEB DESIGN · ART DIRECTION

Meridian

A journey begins before departure.

SELF-INITIATED CONCEPT · FICTIONAL BRAND

ROLE

UI design & Figma build

TIMEFRAME

2026

PLATFORM

Desktop & mobile web

A service, not a catalogue.

A catalogue of packages would work against Meridian's personal service. The challenge was to communicate place and expertise while keeping one action clear: starting a trip inquiry.

01 Define the visual world

Spruce, stone and brass colors pair with Instrument Serif and Hanken Grotesk. Coordinates and route markings make the travel identity specific.

02 Build a reusable system

I assembled the homepage with auto layout and reusable components, then extended the system into the Journal index and article page.

03 Refine with feedback

Mentor feedback led to a wider inquiry bar, a clearer way to view all journeys and a route motif in the hero. The homepage was then adapted to 440 px mobile.

Let the brand guide the interface.

1200 PX INQUIRY BAR / HAND-DRAWN ROUTE / COORDINATES

01 Give the inquiry room to work

The inquiry bar grew from 720 px to the full 1200 px content width. Adding Trip style captures how someone wants to travel alongside where, when and with whom.

02 Make the route the signature

A dashed route with waypoints replaced less effective hero treatments. A mask and Smart Animate create its reveal in the Figma prototype.

03 Carry one idea across the system

Coordinates connect the latitude strip, destination photography and footer. The same editorial hierarchy carries through the Journal and its stories.

An editorial world, across sizes.

NEXT

Complete the mobile Journal pages and design the trip-inquiry flow. Test whether travellers naturally begin with the inquiry bar or explore signature routes first.

UX STRATEGY · INFORMATION ARCHITECTURE

Zomato

IA redesign

One app. A clearer appetite.

Intent. Then action.

Order in

Dine out

Home

Search

Orders

Account

UNSOLICITED CONCEPT · NOT AFFILIATED WITH ZOMATO

ROLE

UX designer · individual project

TIMEFRAME

5 days

PLATFORM

Information architecture

When everything is a destination.

In the version I audited, food delivery, dining, grocery and events competed for attention. Cuisine shortcuts, promotional banners and restaurant cards added more choices before a person could act on their intent.

- 01 Verticals compete for navigation
- 02 Content overload on Home
- 03 Promotions blur the hierarchy
- 04 Navigation changes across updates
- 05 Grocery redirects to a separate app

DESIGN QUESTION

What did you come here to do?

Use intent to organize the experience before introducing more content.

Four destinations. Clear responsibilities.

Home

Order in / Dine out
Top cuisines & reorder
Restaurant feed
Dining & reservations

Search

Restaurants & dishes
Cuisines
Contextual filters

Orders

Active order & tracking
Past orders & reorder
Dining reservations
Support & refunds

Account

Profile & addresses
Gold membership
Payment methods
Preferences

Blinkit and District remain reachable through clearly signposted deep links, outside the core navigation.

Two ways in. One ordering journey.

01

Confirm location

02

Choose intent

03

Search or browse

04

Restaurant & menu

05

Customize items

06

Review cart

07

Pay

08

Track delivery

09

Rate the experience

WHAT I'D DO NEXT

Test findability with real users, compare the four-tab model against the audited structure, and test the Order in / Dine out split. Validate the number of cuisine shortcuts rather than treating six as settled.

Card sorting, tree-testing methods and progressive disclosure informed the proposal. No quantitative validation results are recorded in the supplied case study.

INTERACTION DESIGN · SHORT STUDY

Verge

A little space to think clearly.

INDEPENDENT APP CONCEPT

ROLE
UI/UX design

TIMEFRAME
Four-step concept

PLATFORM
Mobile app

Make space for a more honest answer.

01 Name it

02 Prioritize

03 Reflect

04 Review

A reflection should leave room.

A pros-and-cons list treats every reason as equal. Difficult decisions need room for personal priorities, uncertainty and the possibility that someone is not ready yet.

01

Name it before solving it

The first screen reassures the user: No need to solve it yet. Optional context lowers the pressure to write a perfect answer.

02

Make the trade-off visible

Choosing three priorities from six, then ranking them, lets the review connect back to what this person values most.

03

Leave room for Not yet

The review proposes a direction but includes This feels right and Not yet, plus a readiness slider. Testing must establish whether its interpretation feels helpful or too prescriptive.

NEXT

Design the Not yet path and the follow-up after saving a decision. Test with people facing a real choice, especially whether the generated reflection overstates what their words imply.

Behind the work.

DETAILS THAT CARRY AN IDEA

REPUP / MERIDIAN

01

A SYSTEMS PERSPECTIVE

The interface is only part of the system.

Engineering taught me to look at connections. In design, I start with the journey: what brings someone here, what they need now, and where the experience takes them next.

02

ON VISUAL DETAIL

A detail should carry an idea.

A route becomes a signature in Meridian. A progress chart gives RepUp a daily rhythm. I look for visual choices that make an experience more useful and more recognisable.

Have something in mind?

Let's talk.

I'm open to UI/UX designer and UI developer roles.
